DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3 and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Wang (US 6,743,028).

Regarding claim 1, Wang discloses an electric card fastener (2) with elastic metal cantilever (22), configured to a circuit board (not shown), for fastening an electric card (3), wherein said electric card fastener is formed by a corresponding mounted base (23), said mounted base including:

a cantilever (22), wherein a restricted portion (221) is disposed along said cantilever;

a mounted portion (23), wherein said mounted portion connects with said cantilever, one or at least one joint portion (232) is disposed underneath said mounted portion, said mounted portion further has an extended portion (E1, see Examiner's attachment) inclining outward, whereby a connecting portion extending from said extended portion connects with said cantilever, and after the connection, by said connecting portion, said cantilever is elastic for backward and forward movement.

Regarding claim 2, Wang discloses said cantilever and said mounted portion are formed by bending a one-piece metal material for ground connection.

Art Unit: 2833

Regarding claim 3, Wang discloses said restricted portion is in a cambered protruding shape.

Regarding claim 5, Wang discloses the joint portion is mounted in said circuit board by surface mounted technology.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Wang (US 6,743,028).

Wang substantially disclose the claimed invention except for a hook on the joint portion.

Whether joint portion having a hook to puncturing through the board or not would have been an matter of design absent the criticality, since the operation of the fastener is still the same.
